

Palziv Solutions for Construction Insulation

Acousti-Kal

Acousti-Kal is used as acoustic insulation for impact sound between floors in multi-floor buildings.

Acousti-Kal is supplied in cross-linked, closed-cell polyethylene foam sheets or rolls. The product is user friendly, simple to install, waterproof, chemically resistant and has high thermal insulation capabilities.

Acousti-Kal application under flooring

Installation of Acousti-Kal

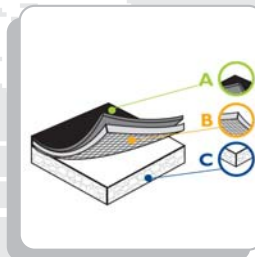

Sheet overlap blocks transmission of sound

Acousti-Pipe Premium 10

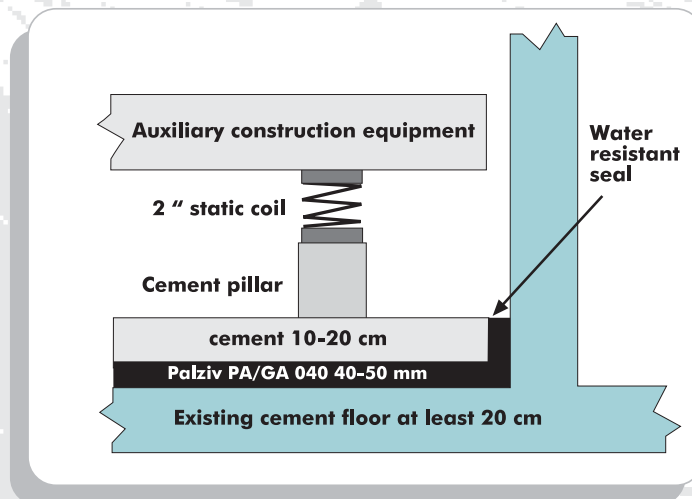

The ideal solution for acoustic insulation of sewage pipes in the construction industry, engine or generator sonic disturbance, and other sources of noise.

Acousti-Pipe Premium 10 is composed of a unique combination of materials to ensure noise absorption at both high and low frequencies

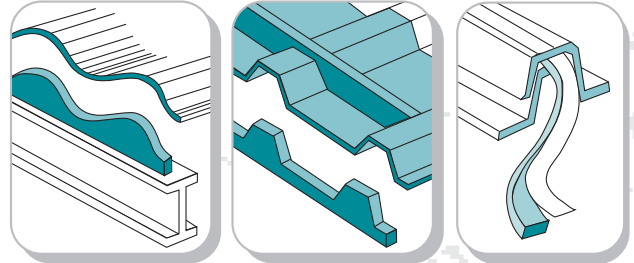

Acousti-Tzaf

The ideal solution for the prevention of vibration noise

Sealing Strips

- The ideal solution to seal slated roof tops.
- Prevents birds, insects, water and dust from entering slated roofs.
- Chemically resistant.
- Prevents the formation of rust and mildew.
- Provides acoustic insulation to outside noise.
- Highly durable. Can be tailor-made per customer request.

Plasterboard Sealing Strips

Cross-linked, closed cell polyethylene foam sealing strips ensure durable sealing for plasterboard partitions.

The strips are applied between the plasterboard and the connecting wall and floor.

The product serves as a water sealant and noise insulator in open areas.

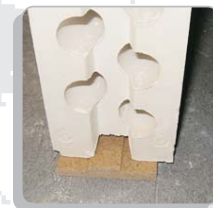

It is available in various sizes, according to the dimensions of the partition wall. It is highly durable, will withstand the weight of the partition wall panels and yet is still lightweight and will not crumble over time.

Palziv Plasterboard Sealing Strips

A new - style sealing strip for plasterboard blocks.

Composed of cross-linked polyethylene foam with a natural cork additive. These durable, form-fitted strips are designed to provide acoustic insulation and a sealant foundation for plasterboard walls.
