Palziv Packaging

Intelligent Packaging for sensitive products.

Palziv Intelligent Packaging is perfect for the padding of ultra-sensitive products. Protect your valuable equipment from the shock, dust, moisture and preventable damages that can take place during transport, warehousing or handling.

We can create an item-specific foam assembly to protect and secure a wide range of products like delicate medical devices and electronic components, or much larger pieces, such as sensitive industrial equipment.

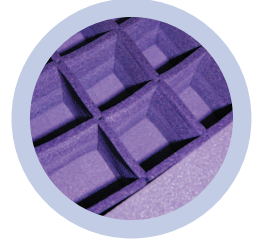

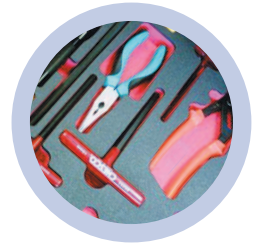

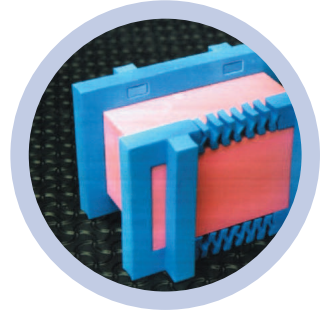

Palziv offers foam choices for your particular purpose: Galfoam™ extruded in roll form, or Palfoam™ batch-produced in block form. Both types are lightweight, durable, conductive and static-dissipative foam materials. Options include various foam densities, hardnesses, and colors.

Consult with our experienced R&D team to determine the best properties for your custom-made packages. Palziv offers Milling (CNC), assembly and fully integrated solutions to complement your base package, case or carton.

Palziv foam complies with the following international standards:

- Federal and military standards AA-59135 & AA-59136
- Corrosion standards Mil-Std-3010 and Mil-B-81705C
- Federal Test Std. 101C, Method 3005.

For best results, follow our technical recommendations regarding aerating time, humidity limitations, etc.
